

## Switch and Control Board

# KS MSD Digital

The switch- and control unit **KS MSD Digital** makes it possible to test windows, doors and curtain walls after national and international standards. The operation will be done very convenient and easy from the control desk. All tests can be done very precise through the user. You can read the values **direct** and easy on digital displays.

The air loss can be measured in negative and positive region. The principle of this flow measurement is based on the heat transfer (calorimetric) method.

The suction- pressure tests can be done manual or optional automatic. Over a potentiometer and frequency converter you are able to adjust the pressure very precise.

The water can be adjusted at the control desk by opening and closing the water mixer. The values will be shown on digital displays in l/min.

The switch and control cabinet can be extended by a PC control system.
